S : Standard O : Option / : not available NC : unknown when going to print

The vehicle registration capacity and MIRO are calculated as accurately as possible according to European regulations. They only account for standard installations and equipment with a margin for error of +/- 5%. MIRO includes freshwater and gas tanks filled to 90% capacity, plus one gas can filled to 90% capacity. It also includes the weight of the driver, set arbitrarily at 75 kg. Contact your dealer if you add accessories that may alter these figures. The 5% margin of error has been accepted by the European regulations to account for possible variations in RV weight owing to differing manufacturing techniques for the chassis and the trailer. The average thickness of the outer paneling may

vary, the relative humidity of porous elements, etc. To make up for variations in manufacturing, PILOTE undertakes to deliver an RV whose actual MIRO falls within the 5% error margin indicated and accepted during the registration process. Attention, the quoted weight does not include options or additional equipment that can change the MIRO and decrease the payload. 2012 Collection : motorhomes corresponding to the technical and aesthetic specifications presented in this present catalog are considered belonging to the 2012 collection when they are registered from July 1st, 2011. This is a rule in the motorhome business where the notion of year edition does not exist.
